Use Case #2

Login(Student)

***BASIC COURSE*:**

On the <u>Login page</u>, the student clicks on the text box to enter their email and password. Then they click on the *Student* button, if they have successfully entered a right email and password, they will be redirected to the <u>Dashboard page</u> after verifying it in database.

***ALTERNATE COURSES*:**

The student enters wrong email address and password:
The system will verify it with the database and if it is wrong then let the student re-enter their email and password after displaying the error.
